

M-800

M-800

The M-800 Series is an attractive, economical sliding patio door system designed for a variety of residential applications. M-800 doors are available up to an LC30 Performance Rating, making them ideal for all residential applications.

The M-800 Series is built to serve as a primary doorway to patios, decks, and pools. The slim profile of the M-800 adds to the look of both older construction as well as newer building designs.

The large door panels offer a clear view and are fully reversible for right- or left-hand operation. The panels incorporate insulating glass to help keep cold air out during winter and to maintain lower air-conditioned temperatures during the summer. Insulating glass also prevents condensation formation.

Compared to wood or vinyl doors, M-800 aluminum doors offer distinct advantages. Aluminum has a longer life span and won't crack or corrode. M-800 doors are low maintenance and don't require periodic painting or refinishing. They also maintain their dimensional integrity, because aluminum does not absorb moisture.

Standard colors of white, bronze and sandstone are available, with custom colors and sizes also available.

Flexibility Weatherability Economy

M-800 Sliding Glass Patio Doors economically provide the durability needed for years of trouble-free, low-maintenance operation. The M-800 incorporates full perimeter weather stripping and positive seal interlock construction. This keeps the elements out and helps prevent insects from getting in.

Coped frame and panel corners will not separate, providing tighter connections, improved air and water resistance, and longer, low-maintenance door life

Standard 5/8" glazing with 1/8", 3/16", and 1/4" available for improved thermal performance

Full-perimeter weather stripping helps reduce air infiltration

Hollow pull rail for added strength and durability

Anodized sloped sill sheds elements, maintains appearance despite years of traffic

*M-800 doors are AAMA certified.
For maximum size and configuration options, consult with factory.*

- Transom
- H-Mull
- Frame depth options: 3-5/8", 5" or 6" (with drywall return)
- Key locks
- Can be used with M-1200 storm door for sound reduction and thermal improvement

Manufacturer of
Certified Products

The Beauty of Recycled Aluminum

M-800 Patio Doors are constructed of aluminum that contains a high recycled metal content. Remelting recycled aluminum requires only 5% of the energy needed to produce primary aluminum, and all of the metal's properties are retained. At the end of their useful life, the doors can be recycled once again.

The M-800 Series is manufactured with a firm commitment to the belief that our products should benefit the

everyday lives of our customers, contribute to our communities, and protect our environment.

We place a strong emphasis on innovation in the design and manufacture of our products. By balancing efficiency with continuous innovation and new technology, we bring our customers outstanding products and incomparable value.
